### **INSTRUCTIONS TO STUDENTS**

1. This Question paper consists of 14 pages including a cover page with 5 Questions only.
2. Attempt **ALL** the **FIVE** questions. All questions carry equal marks and the distribution of the marks for each question is given.
3. Please print all your answers in this booklet.

A = 10

B = 11

C = 12

D = 13

E = 14

F = 15

## QUESTION 1

a) Perform the following arithmetic, and write the necessary outputs.

i)  $5A.04H - 3F.2CH$

ii)  $35.42_7 + 6.26_7$

iii)  $1000.001_2 - 111.11_2$

b) Design a combinational logic circuit in detecting odd numbers. The odd numbers detector is one that produces HIGH output when the decimal equivalent binary input is odd, else it produces LOW output. Do the following.

[2+1+1 marks]

- Construct the truth table
- Simplify the Boolean expression into SOP using Karnaugh-Map
- Draw the 3-input odd number detector based on (ii) using only NAND.

## QUESTION 2

a) Given Boolean function  $F(A, B, C, D) = \sum m(1, 3, 4, 5, 6, 11, 13)$ . You are required to design a circuit implementation of the function using  $8 \times 1$  Multiplexer (MUX).

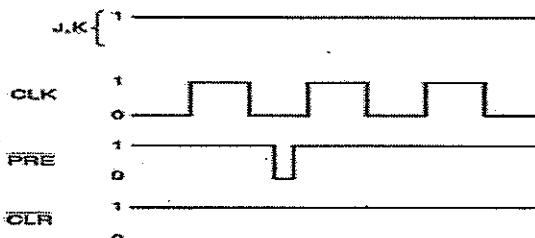

- i) Construct the related truth table [2 Marks]  
 ii) Implement the logic circuit by using an  $8 \times 1$  MUX and the needed logic gates [2 Marks]

b) Draw the output (Q) of these Asynchronous inputs negative going transition JK Flip-Flop by complete the Q for the timing diagram below: [1 Mark]

c) Design a synchronous counter that has two negative-edged triggered D flip-flops with three inputs X, Y and Z (with order accordingly). Implement the counter based on the two conditions listed below:

- If X is 1, Y and Z will count up based on  $00_2, 01_2, 10_2, 11_2$  and repeat.
- If X is 0, Y and Z will count down based  $11_2, 10_2, 01_2, 00_2$  and repeat.

Your design should include:

- (i) By referring to Excitation Table for D flip flop (provided in Appendix), construct the State Table. [2 marks]
- (ii) Perform simplification for each D flip-flop input by using Karnaugh Map. [2 marks]
- (iii) Construct the counter using D flip-flops. [1 mark]

### QUESTION 3

- a) Assume the usage of 8-stage instruction pipelining with a program consisting of 10 instructions. The clock frequency is 40 KHz. Answer the following with showing the proper steps:

- Identify the time needed to execute each stage of all instructions.
- Assume the usage of ideal pipelining without any hazards, what is the time needed to complete all the 10 instructions.
- If pipelining is not used, what is the time required to execute these 10 instructions.
- Identify the speed up factor, K for the instruction pipeline as compared to without pipeline.

- c) Given the following registers and a two-address machine, write a program to compute  $T$

$$T = (K \times M - R) / (S + L).$$

Available instructions are given below:

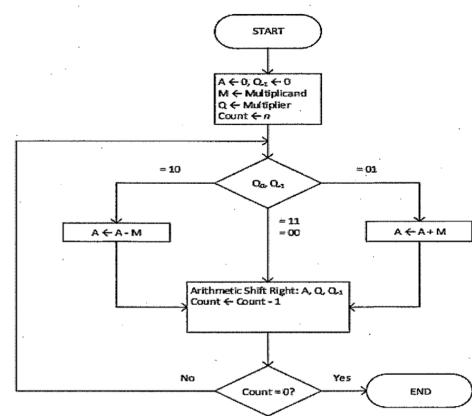

- Temporary Registers (in order): A, B, C, D and E
- K, M, R, S and L are Data
- Instructions: MOV R1; #DATA; MOV R1, R2; ADD R1, R2; SUB R1, R2; MUL R1, R2 and DIV R1, R2

Store the final result in Register T. (Hint: Instruction format = opcode destination, source) [3 marks]
